

Turnitin

Reliable Similarity Detection Tool

Quick Submit

FOR INSTRUCTORS ONLY

Instruction

- The Quick Submit feature is for instructors only.
- Instructors can use Quick Submit on Turnitin.com to submit documents for similarity checking without creating a course or assignment.
- The Quick Submit method only provides basic similarity checking; additional features (such as rubrics) will not be available.
- This guiding document is for reference only. The submission method (which supports at least single-document submission), available features, and limits of Quick Submit may be adjusted at any time.

About this page

To customize your search, select from the available databases below.

Customize Your Search

To customize your search targets, select the databases you would like to include when comparing papers submitted to this assignment. Click submit to add the assignment to your class homepage.

- Search the internet**
Includes the current content of relevant internet sources, and also contains content no longer available on the live internet that we have stored in our proprietary database.
- Search student papers**
Includes papers submitted to Turnitin. This database contains millions of documents.
- Search periodicals, journals, & publications**
Includes content contained within licensed commercial databases; includes many popular periodicals, publications, and academic journals.
- Search the iGroup**
Includes all papers submitted to the iGroup.

Submit papers to: 
no repository 

Choose the comparing database here. We suggest you to select the first three.

Choose "no repository" to make sure your paper will not be submitted to the Turnitin repository.

so endangered.

The blue whale's common name derives from bluish-hue that covers the upper side of its body, while its Latin designation is *Balaenoptera musculus*. The blue whale belongs to the Mysticeti suborder of cetaceans, also known as baleen whales, which means they have fringed plates of fingernail-like material called baleen attached to their upper jaws. Blue whales eat almost exclusively on krill, though they also take small numbers of cope pods. An adult blue whale can eat up to 40 million krill in a day.

These gargantuan beasts used to dominate all the oceans of the Earth up until the late nineteenth century, when the technology was developed to effectively hunt and harvest them. In 1864, the Norwegian Svend Foyn equipped a steamboat with harpoons specially designed for catching large whales. This led to the killing of hundreds of thousands of whales up until 1966, when the International Whaling Commission banned the practice.

The blue whale is grand in size and beauty, but the sounds it produces and how it communicates are the same way that consist of the currently known calls.

Matches
Similar or same as some text in the paper. The matches are highlighted and the colors will correlate with the sources listed in the insight panel.

Source:
Where a particular match has been found. Sources are listed numerically in right insight panel and it is possible to have multiple matches for each source.

hale oil drove them to the brink of extinction. But there are other reasons for why they are now so endangered. The blue whale belongs to the Mysticeti suborder of cetaceans, also known as baleen whales, which means they have fringed plates of fingernail-like material, called baleen, attached to their upper jaws. Blue whales feed almost exclusively on krill, though they also take small numbers of copepods. An adult blue whale can eat up to 40 million krill

These gargantuan whales in the nineteenth century, and in 1864, the Norwegian whaling industry was catching large whales. When the International

The blue whale certainly appears grand in size and beauty, but the sounds it produces and how it communicates are also sublime. amazingly, their vocalizations can reach 155 and 188 decibels and have a frequency range of 10 to 40 Hz. Though they typically do not “sing” in the same way that Humpback whales do, some subspecies have been observed producing songs that consist of up to four notes. Blue whale calls are still not fully understood, and scientists are currently working on determining their purposes. among the hypotheses, researchers believe the calls could serve to determine one’s geographic location, identify individuals, or locate prey.

Using the filter

Click the red funnel-type button to set the filter, including:

- *Excluding quotes: 'quotes' refers to the quoted text in the text enclosed in double inverted commas, such as legal provisions.
- *Exclude bibliography: tick this box to indicate that the reference part of the text will not be counted as repetition rate.
- *Exclude small sources: for example, you can set the repetition rate of less than 1% of the repetitive sources are not counted.

for its adaptations beyond its massive size. at 30 metres (98 ft) in length and 190 tonnes (210 short tons) or more in weight, it is the largest existing animal and the heaviest that has ever existed. Despite their incomparable mass, aggressive hunting in the 1900s by whalers seeking whale oil drove them to the brink of extinction. But there are so endangered.
